

OPTIMA™

Overcurrent Protection Module - Fuseholder

for **13/32" x 1 1/2"** (10mm x 38mm) Fuses

OPM-1038

Non-Switch Series

Physical Characteristics:

- Small size matches 45mm IEC starter width.
- Fits #8-18 AWG stranded wire, #10-18 AWG solid wire.
- 3-pole version.

Product Features:

- "Open" fuse indication lights. (Min. 100V required)
- Cam action handle for easy removal.
- Finger safe terminals. (Qualified as IP20 per IEC529)
- Removable module for convenient fuse loading.
- 35mm DIN-rail or screw panel mounting (#8 screw, 1 1/4" long).
- Dead front construction.

	R - Class CC									

Additional Features:

- Option for remote "open fuse" status indication feature available (less down-time).
- Offered with Class CC rejection clips or European 10mm x 38mm clips to meet global needs.
- Wire ready: Saves time as terminals are ready to accept wires.

Materials: Grey Thermoplastic

UL Flammability: UL 94V0

OPEN FUSE INDICATION

Status Output Specifications:

- *Minimum operating voltage: 460Vac, 3-phase
- *Maximum operating voltage: 620Vac, 3-phase
- Status output maximum conducting current: 40mA
- Status output maximum on resistance: 35 ohms @ 40mA
- Status output typical off resistance: >10 Mohm
- Status output maximum turn-on and turn-off delay: 850 milli-second

Status Output Interface Specifications:

- Rated Voltage: Recommended 5-35Vdc, 300Vac max.
- Rated Current: 40mA max.
- Wire Size: #28-14 AWG
- Torque: 2.25 lb. in.

Open Fuse Indicator Status Output Description:

The open fuse indicator status output acts very much like an on/off switch. With all three fuses in place and operating properly, this status output has a high resistance value of greater than ten mega-ohms. When one or more of the fuses are open, the status output becomes turned-on with a resistance value less than 35 ohms. This status output withstands voltage (AC or DC) up to 35 volts at off-state and conducts current up to 40 milli-amperes at on-state. Applying voltage and current exceeding these limits will result in damage to the components inside this status output device permanently. There is some time-delay when the status output changes on/off state. The open fuse communications or status output device includes optical isolators within the unit.

Communications output states:

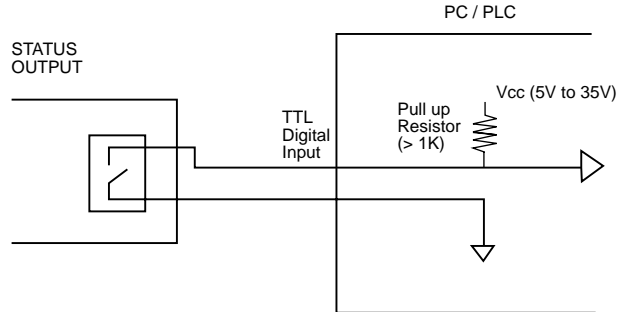

Fuse Good	NO - High Resistance, >10 mega-ohms
Opened Fuse	NC - Low Resistance, < 35 ohms

Note: Operating this device beyond the above limits will cause permanent damage to the components on the board.

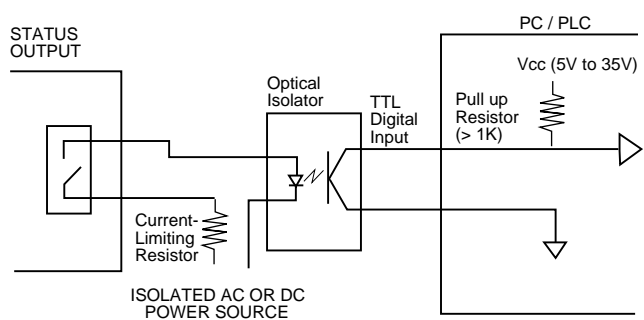

For applications requiring status output below a system voltage of 460V, contact Bussmann.

The examples shown below illustrate typical interface to Programmable Logic Controllers.

EXAMPLE 1: DIRECT INTERFACE TO PC/PLC

EXAMPLE 2: INTERFACE TO PC / PLC WITH OPTICAL ISOLATION

Note: When energized, a low load terminal voltage will be present when fuses are open or when pullout module is removed. The leakage current is limited to .5mA maximum.

Example of Output Voltage with three open fuses or pullout module removed.

Catalog Number Type of Indication	OPM-1038, OPM-1038R Standard	OPM-1038C, OPM-1038RC Communication

600Vac, 3-phase	33Vac	88Vac

*The communication device requires a minimum circuit voltage (1L1-3L2-5L3) of 460 volts for the status indicating device to operate. Below 460 volts, but above 120 volts the indicator lights will luminate, but there will not be any communication status output.
